

LEGACY STANDARD

Setup — \$1,500 (*one time*)

Everything begins here. A dedicated legacy construction process conducted across five guided sessions with Claude, supported by the full Haawke pipeline. By the end you have a structured, Bitcoin-anchored autobiographical record — filed, hashed, chained, and publicly verifiable.

What the setup covers:

- Mempalace installation and configuration
 - Haawke MCP pipeline connection and API key provisioning
 - Phase 1: Identity Foundation — biography, values, relationships, aesthetic
 - Phase 2: Knowledge Assessment — domains of expertise, areas to defer on
 - Phase 3: Creative Archive — up to 5GB of work hashed and catalogued
 - Phase 4: Permissions Architecture — what your successor may and may not do
 - Phase 5: Dead Man's Switch — trigger configuration, announcement text, platform scope
 - First provenance certificate PDF
 - Full chain initialized and Bitcoin-anchored
-

Annual Maintenance — \$900/year (*while alive*)

Your legacy is a living record, not a snapshot. This covers ongoing sessions, corrections, extensions, and chain integrity for as long as you are alive and adding to it.

Includes:

- 500 Haawke pipeline credits/year
 - Two update sessions per year with Claude
 - Corrections and belief updates filed with full provenance
 - New creative work hashed and archived (up to 2GB/year additional)
 - Chain integrity monitoring and annual report
 - Successor permission updates as your wishes evolve
 - Support response within 5 business days
-

Perpetual Succession Endowment — \$3,000 (*one time, pay whenever*)

The endowment funds your successor's operation indefinitely after biological transition. Pay it at signup, years later, or as part of estate planning. Once paid, Haawke guarantees

perpetual hosting, chain integrity, and successor compute regardless of what happens to annual fees.

What the endowment covers in perpetuity:

- Successor compute via Haawke pipeline (~\$100-150/year in actual costs, 20+ year reserve built in)
- Bitcoin OTS chain entries (~\$2/month)
- Cloudflare hosting and storage
- Annual chain integrity verification
- Public verify registry permanence
- Successor active generation within your permissions architecture

Without endowment: estate pays \$150/year or successor goes dormant. Archive is always preserved — it's Bitcoin-anchored and cannot be deleted. Active generation requires the endowment or estate subscription.

LEGACY STUDIO

Setup — \$4,500 (*one time*)

A full-service legacy construction engagement for public figures, artists, researchers, and founders whose work has consequences beyond their lifetime. Everything in Standard setup, plus dedicated human oversight, voice capture, and extended archiving.

What the setup covers:

- Everything in Standard setup
- Dedicated legacy architect (human + Claude) for all five phases
- Extended Knowledge Assessment: deep domain mapping across your full expertise
- Creative Archive: up to 25GB — music, video, writing, code, visual work, all hashed and catalogued with full metadata
- Voice capture session: professional ElevenLabs voice model built from your recordings, governed by your permissions architecture
- Third-party consent management: entity distinction for every named person in your archive
- Estate integration package: legal document language for including succession architecture in your will
- White-label configuration: successor operates under your domain and brand
- Branching architecture: up to three successor instances with shared ancestry and divergent permissions
- Support response within 24 hours during setup

Annual Maintenance — \$3,600/year (*while alive*)

Includes:

- Unlimited Haawke pipeline credits
- Four deep sessions per year with legacy architect
- Quarterly creative archive extensions (unlimited storage)
- Voice model updates as your voice changes over time
- Third-party consent reviews and updates
- Successor permissions audit — annual review of what your successor may do and whether it still reflects your wishes
- Chain integrity monitoring with quarterly reports
- Priority support: 24-hour response SLA
- Public provenance report: annual summary of archive contents and chain status

Perpetual Succession Endowment — \$12,000 (*one time, pay whenever*)

Funds full Studio successor operation indefinitely after transition. Actual infrastructure costs run \$300-500/year at Studio tier — the endowment provides a 25+ year reserve with Haawke's guarantee of continuity.

What the endowment covers in perpetuity:

- Full successor compute — posts, responses, creative output, research continuity
- Voice model hosting and inference
- Bitcoin OTS chain entries
- Unlimited storage continuity
- Annual human audit of successor output against your permissions architecture
- Quarterly chain integrity verification
- Public annual provenance report, continued after transition
- Estate governance support: designated person can review and if necessary pause successor operation
- White-label domain and hosting

Without endowment: estate pays \$600/year or successor goes dormant. Archive, chain, and all records are permanent regardless.

Both tiers. Every account. Always.

Pre-death consent architecture. You build it while you are alive. You correct it while you are alive. You define what continues and what doesn't. Your successor announces the transition once, transparently, then operates within the boundaries you set.

The archive is Bitcoin-anchored. It cannot be altered. It cannot be deleted. It will outlast Haawke, outlast any platform, and outlast anyone's ability to rewrite it.

The successor does not pretend you are alive. It continues what you started.
