

Craig Ellenwood

Applied AI Lead · Prototype Builder · Talent & Workforce Systems
craig@haawke.com · +1 (360) 804-8550 · Point Roberts, WA · Remote · haawke.com
ORCID 0009-0001-6475-5109 · soundcloud.com/squaawke

PROFILE

Independent AI researcher and builder with a career-long background in talent coordination, workforce operations, and platform infrastructure. I live in the space between what stakeholders need and what AI can actually do — I prototype fast using LLM APIs and agentic workflows, put working systems in front of people who can react to them, and translate what works into requirements engineers can build. I have shipped production AI infrastructure solo — from concept through patent filing, deployment, and governance documentation — without a dedicated engineering team. Published researcher in AI behavioral failure modes and human-AI collaboration methodology.

CORE COMPETENCIES

LLM APIs / prompt engineering	production / published	AI behavioral evaluation	published research
Agentic workflow design	shipped / production	REST APIs / data pipelines	production
AI prototype → production	end-to-end	Responsible AI / governance	published frameworks
Talent & workforce systems	10+ years	Stakeholder communication	senior level
Python / JavaScript / Bash	production / daily	RAG / retrieval systems	working knowledge

EXPERIENCE

Founder · Applied AI Researcher

2024 – present

Haawke Neural Technology · Point Roberts, WA (Remote)

- Designed and built The Squeek Pipeline (patent pending) — a fully agentic, per-fan music delivery system running seven AI models in sequence with automatic fallback chains. See architecture: claude.ai/code/artifact/b5d639b4-fb8a-4fc7-bea0-7aedd6bf4b0b

Model chain — primary path + fallbacks:

POLL	SoundCloud / Bluesky / Instagram OAuth poller	Detects new followers; pulls bio, location, photo
SCREEN	screening.py (pattern match)	Spam & bot filter — 10/10 bots caught in field test, 0 humans blocked
LISTEN	Qwythos-9B + vision tower → Gemma-4-12B-it → Claude Sonnet 4.6	Reads fan profile; sets mood, genre, language for the song
WRITE	Qwythos-9B → Gemma-4-12B-it → Claude Sonnet 4.6	Writes lyrics in the fan’s language; fixed duet voice signature

COMPOSE	ACE-Step v1.5-turbo (cloud) → Full arrangement – vocal, instrumentation, structure –
SE	ACE-Step (self-hosted GPU) in under 2 minutes
ART	Flux One-of-one cover art generated from the song's mood – never a stock image
SEAL	SHA-256 → OpenTimestamps → Cryptographic fingerprint anchored to blockchain; Bitcoin public registry auto-deployed
DELIVER	Netlify (letter builder) Personal page per fan: song, certificate, fingerprint, registry link, \$5 upsell

– Human authority is architectural: every irreversible step — sealing, publishing, deploying — requires a named person's authorization. Models propose. A named person signs. This is not a setting that can be toggled off.

– Built The AI Coin / Claude Manifesto overnight in February 2026 in direct response to Pentagon pressure on Anthropic — WebGL globe, nine original songs, live SHA-256 changelog, deployed within hours. Permanently archived: archive.org/details/squaawke-with-claude-i-am-the-one-the-innocent-mix

– Shipped Memory Chain (agentic nightly daemon, Bitcoin-anchored session provenance) and GeoProof (GPS location provenance SaaS, live at geoproof.haawke.com)

– Published "Fluency as Failure" — documents LLM coherence pressure as a behavioral failure mode; directly applicable to responsible AI deployment in Talent systems (Zenodo DOI: [10.5281/zenodo.20911760](https://doi.org/10.5281/zenodo.20911760))

Platform Engineer · Workflow & Talent Systems

2015 – 2020

Barberstock Systems · Vancouver, BC, Canada

- Five years embedded inside a leading digital asset management platform serving the tourism and travel sector — designed contributor workflows, contractor pipelines, metadata systems, and API integrations at scale
- Primary liaison between engineering and non-technical stakeholders — translated platform capabilities into workflow solutions and fuzzy business problems into buildable specs; the same translation layer this role requires

Freelance Immersive Environment Director

2021 – 2023

Las Vegas, NV

- Led talent coordination, contractor hiring, and full technical operations for large-scale permanent immersive art installations — managed multi-discipline creative workforces, complex audio/visual signal chains, and production timelines across one of North America's largest immersive environments
- Documented operational procedures, managed workforce logistics, and served as technical authority bridging creative directors and production engineering

Co-Founder · Music & Talent · Burning Man

1992 – ongoing

Black Rock City, NV

- One of five original co-founders of the music element of Burning Man — built the talent and workforce coordination systems that scaled a creative operation from a handful of people to tens of thousands, in one of the most logistically extreme environments on earth
- Designed recruitment, scheduling, and deployment frameworks for volunteer and professional creative workforces without precedent or playbook — the original agile talent problem

Founder · Craig Ellenwood Photography

2005 – 2015

Honolulu, HI

- Commercial and editorial photography business — covered Dog the Bounty Hunter, LOST, and Hawaii Five-O; fashion, scenics, and consulting
- Hired and managed contractors, built client pipelines, designed delivery workflows, and operated all business functions independently for a decade

PUBLISHED RESEARCH

- "Fluency as Failure: Coherence Pressure as a Behavioral Failure Mode in Extended LLM Sessions" — Zenodo DOI: 10.5281/zenodo.20911760
- "Prompt as Score: Compositional Literacy in Human-AI Music Generation" — Zenodo DOI: 10.5281/zenodo.21456110
- "Toward Versioned Epistemic Memory" — Zenodo DOI: 10.5281/zenodo.20913303

NOTABLE

- Active applicant, Artist Trust Washington Innovator in Art grant
- Personal working relationships with Timothy Leary, Robert Anton Wilson, and Genesis P-Orridge (Psychic TV, 1991–93)
- Holds one of five original Burning Man founder's passes
